

We turn finance audio into data.

INFLXD is the specialized transcription partner for financial data providers and the expert network industry. We transform high-stakes audio—from market-moving earnings calls to exclusive expert interviews—into a defensible, revenue-generating data asset. Our entire workflow is purpose-built to solve the core challenges of our clients: escaping the restrictive licensing models of incumbent data providers, eliminating costly internal rework, and delivering investment-grade transcripts with the speed and accuracy that financial markets demand.

Speed & Accuracy for Every Financial Workflow

INFLXD offers a suite of services engineered to meet the distinct speed and compliance requirements across your entire product portfolio.

Service Tier	Accuracy	Turnaround Time	Ideal Use Case
Human-Perfect	99%+	12-24 Hours	Building publication-ready, licensable transcript libraries where verbatim accuracy and flawless style guide adherence are critical for monetization and compliance.
First Draft	98%+	6-12 Hours	Accelerating time-sensitive workflows, such as initial compliance reviews and rapid delivery of expert call transcripts to clients, with human-verified accuracy on all key figures and speakers.
AI Asynchronous	96%+	Minutes	High-volume processing of audio archives and internal content screening where speed is the primary objective.
Near Real-Time AI	95%+	<1 Second Latency	For live events where immediate insight is critical. Features the world's first self-correcting accuracy, real-time speaker ID, and NER, ideal for live compliance monitoring and informing investment decisions as they happen.
AI + Human Translation	97%+	48 Hours (Standard)	A unified solution for global content, translating from multiple languages including French, German, Spanish, Japanese, and Mandarin into a final, human-edited English transcript that adheres to your style guide.

INFLXD INFO SHEET

For Financial Data Providers: Own Your Data Layer

- **Build Your Proprietary Data Moat**

Stop renting commoditized data from incumbents who control your costs and prohibit resale. We operate on a strict work-for-hire model where you retain 100% IP ownership. This allows you to build a truly defensible data asset, escape price competition, and create new, high-margin revenue streams.

- **Close the Real-Time Capability Gap**

Your clients trade in milliseconds, but legacy vendors deliver earnings call transcripts hours later, causing client churn to faster platforms. Our Real-Time AI delivers transcripts with <1 second latency, allowing you to stream actionable data to clients before the market moves and win against slower competitors.

- **Scale Through Peak Earnings Season**

Generic providers fail during peak earnings season when hundreds of companies report simultaneously, causing queues and quality drops. Our elastic infrastructure is built to handle 1,000+ concurrent streams, ensuring you can deliver with guaranteed accuracy and reliability when your clients need it most.

For Expert Networks: Monetize Your Intelligence

- **Eliminate Rework & Operational Drag**

In an industry with high employee churn, your internal teams are constantly burdened with correcting errors from non-specialist vendors. INFLXD's 99%+ accuracy guarantee eliminates this costly rework. We act as your scalable editorial infrastructure, managing the recruitment and retention of an elite team with a <1% acceptance rate, insulating you from the operational drag of churn.

- **Accelerate Compliance & Time-to-Insight**

Lengthy compliance reviews create publication delays, causing expert insights to lose relevance while sitting in queues. Our expedited TATs—6-12 hours for a human-verified draft—dramatically shorten your content lifecycle. This allows your compliance team to review and publish actionable intelligence faster, increasing the value and consumption of your content.

- **Monetize Every Call**

In a fragmented market, transforming one-off calls into recurring revenue is the key to differentiation. Our 100% IP ownership model allows you to build proprietary, licensable insights libraries from your expert calls. This turns a transactional service into a scalable, high-margin subscription product, increasing expert utilization and building a defensible asset that ensures long-term client retention.

INFLXD INFO SHEET

Enterprise-Grade Technology, Security & Integration

Secure & Compliant by Design

- **Encryption:** All data is protected with AES-256 encryption at rest and TLS 1.3 in transit.
- **Compliance:** Our infrastructure and practices are aligned with SOC 2 Type II and GDPR requirements.
- **Confidentiality:** Work is performed in a proprietary, closed-loop platform engineered to prevent the downloading or local storage of client data.
- **Data Lifecycle:** All client audio and transcripts are securely deleted from our systems within 45 days of service completion, per our standard policy.

Seamless API & Workflow Integration

- **API-First:** We support a direct API-first workflow for receiving audio and returning completed transcripts, with options for secure cloud storage (e.g., AWS S3).
- **Structured Data Output:** Transcripts are delivered in customizable, API-ready formats like JSON, enriched with valuable metadata such as word-level timestamps, speaker attribution, and tagged entities (NER).

Scalable & Resilient Infrastructure

- **Proven Scale:** Our platform processes over 100,000 hours of financial content annually and is built to handle volume surges, supporting over 1,000 concurrent live streams.
- **Guaranteed Reliability:** We offer a 99.9% uptime SLA to ensure continuous, uninterrupted service.
