

# The fastest perfect human transcription for earnings calls and financial data streams.

Near real-time, self-correcting transcription with human-grade accuracy — built for earnings calls, investor days, and the seasonal volume spikes that break legacy vendors. Earnings calls delivered in **1–6 hr**, fastest tier **≤4 hr**. You send the audio; we deliver the transcript.

IN ONE PARAGRAPH

INFLXD was founded in 2019 as an AI consultancy and has since focused exclusively on the expert network and financial data space. Today we power the transcription, translation, and structured-data layer behind leading financial data providers and intelligence platforms — covering thousands of hours of earnings calls, investor days, conferences, and management commentary every quarter, in any language, at near real-time speed.

■ WHAT WE DO

/ 01

01

### Near real-time, self-correcting transcription

Live finance-tuned ASR that self-corrects as the call progresses — tickers, names, and financial figures re-anchored on the fly. Stream audio in, stream transcript out. No audio capture required: you send us the stream or file, we transcribe.

02

### Earnings calls in 1–6 hr, fastest ≤4 hr

Earnings calls returned, fully human-reviewed, in **1–6 hr** across our standard express tiers — fastest at **≤4 hr** or equivalent. Multi-pass perfect copy follows in the same pipeline at 99.9% accuracy.

03

### Continuous, sequential delivery

One pipeline, one source of truth: AI draft → 1-pass HITL → multi-pass HITL, delivered sequentially as accuracy upgrades. End clients never have to choose between speed and accuracy — they get both, in stages.

04

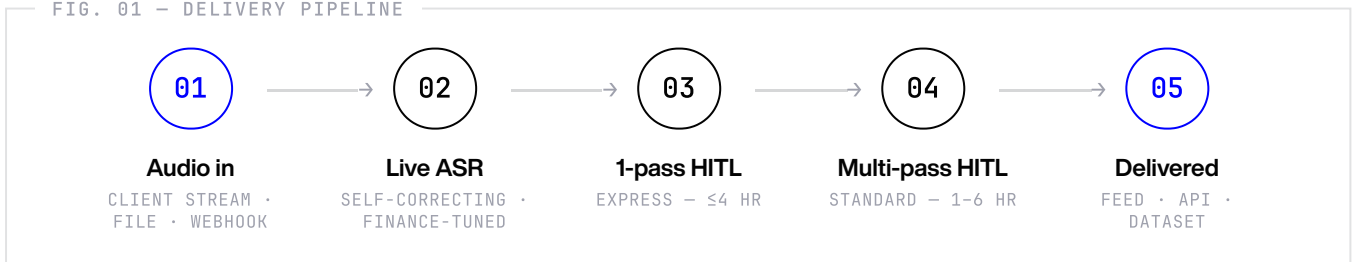

### Structured outputs & AI datasets

Speaker-attributed, timestamped transcripts with finance NER, ticker tagging, Q&A segmentation, and event metadata — delivered as feeds, files, or API. Drop-in ready for terminals, search, and Gen AI retrieval.

■ WHO WE WORK WITH

/ 03

Working with INFLXD has been a game changer for our business — supportive, responsive, and reliable at each step. From active collaboration during technical implementation, to ramping to our earnings-season transcription needs in the course of weeks, to consistent ongoing delivery, INFLXD has continually showed up as a value-add partner rather than just another vendor in our stack.

LEADING FINANCIAL INTELLIGENCE PLATFORM · PARTNER UNDER NDA

■ WHY WE'RE BUILT FOR THIS

/ 04

A – SPEED

**Fastest perfect human transcripts**

Earnings calls returned in **1–6 hr**, fastest tier **≤4 hr** — vs. 12–24 hr from legacy vendors. Plus near real-time self-correcting ASR for desk-ready copy the moment a call ends.

B – SEASONALITY

**Built for earnings season**

A meaningful share of our volume is earnings calls. We ramp up and ramp down with the calendar — peak weeks absorbed, no queuing penalties, no missed releases.

C – CONTINUUM

**No speed-vs-accuracy compromise**

End-to-end ownership lets us deliver sequentially: live draft → **≤4 hr 1-pass** → multi-pass perfect copy. Same job, progressively upgraded — clients stop choosing.

■ BY THE NUMBERS

■ THE FIRST SELF-CORRECTING LIVE TRANSCRIPT

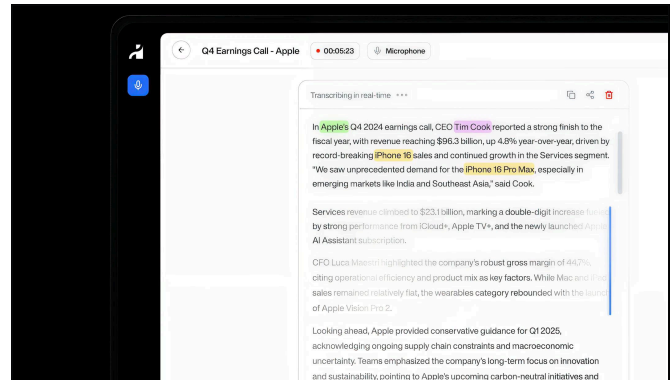

/ 06

**Real-time transcription that improves its own accuracy as the call unfolds.**

Most live ASR commits to its first guess and lives with the mistakes. Ours doesn't. As more context arrives, the engine **re-anchors tickers, named entities, financial figures and speaker attribution** already on screen — correctly identifying who is speaking and which companies they're actually referring to, in real time.

This is the only live transcript on the market that meaningfully self-corrects in finance. It means traders, analysts and downstream pipelines can rely on the live feed with much greater confidence before any human has touched it.

LIVE · SELF-CORRECTING · FINANCE-TUNED

SELF-CORRECTING TRANSCRIPT, MID-CALL — TICKERS, NAMED ENTITIES, FINANCIAL FIGURES AND SPEAKER ATTRIBUTION RE-ANCHOR LIVE AS MORE CONTEXT ARRIVES.

■ THE ACCURACY × TURNAROUND CONTINUUM

/ 07

**One pipeline. Three accuracy upgrades. Delivered sequentially.**

Because we own every layer end-to-end, end clients don't pick a tier and wait. The same job ships **live**, then upgrades to **1-pass HITL**, then to **multi-pass perfect copy** — each version replacing the last in your feed. Most vendors stitch ASR, review and structuring across third parties; rigid SLAs, hard trade-offs. We collapse the stack so accuracy and turnaround stop being a choice.

**Built for the next earnings season — and every one after.**

GET IN TOUCH

If you need faster, cleaner, multilingual transcripts that scale with the calendar, we're likely already doing this for a platform you'd recognise. **Let's talk** →
